

Agriculture
in the **Classroom**

A Seed's Journey 25 years of...

growing curiosity

forging partnerships

prospering experiences

enriching education

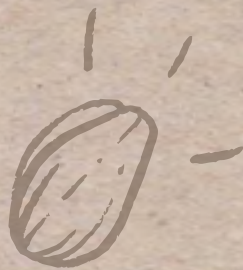

growing and thriving

25 years ago...

**...a seed was planted
in Saskatchewan.**

A small group of people passionate about agriculture realized that children and youth were growing up without a real connection to agriculture. Future harvests would be lean if something wasn't done.

**The mission was to
connect kids and agriculture.**

They became the stewards of our seed and planted it carefully in a field.

The soil provided structure and support for our seed to grow. The financial support we have received from the agriculture community over the years has enabled us to bridge the needs of the agriculture and education communities.

We now have over
200
partners and
sponsors!

Our seed has relied on
the nutrient-rich passion of
volunteers to help reach
more students each year.

The soil provided vital nutrients to help us
share Saskatchewan's incredible food story
through the years.

Over
300
volunteers give
their time and
energy each year.

Every little plant needs constant watering to grow.

Through the years we have been blessed with amazing staff members. Each person has added a fresh sprinkle of innovation to connect kids and agriculture in fun and engaging ways.

The education community shone light on our plant.

We have built strong relationships with the Ministry of Education, curriculum specialists and teachers. Their constant guidance has shone brightly, allowing us to create resources that are valued by teachers and easily incorporated into classroom teachings.

We distribute over
10,000
educator resources
annually!

But the journey has
not always been easy.

Our plant has weathered many storms through
the years. As the environment changed, we
persuaded with hard work, innovation and
creativity.

Our plant continued to grow and thrive!

Partners who share our vision have added new ideas that have fertilized the plant. Together, we are providing more valuable and memorable learning experiences for students.

We now reach
students from over

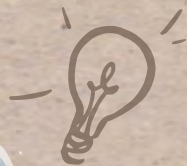

600

schools in
Saskatchewan!

We have grown tall and proud over 25 years.

As each new bud and leaf flourishes, a student is empowered by knowing where their food comes from.

With a living support system for agriculture education, our plant will deepen and strengthen its roots.

Continuing to create meaningful connections between students and agriculture will inspire the buds to release into the world and spread their seeds to those around them.

We have grown to provide agriculture experiences for over

70,000

students annually!

As more seeds are planted and the support continues, we can grow an acre, a section, and one day, a province full of people who understand, appreciate and respect agriculture.

Thank you
for helping us grow!
